# 2023 Highlights

JANUARY

Authority launches BondLink website to educate bond investors

#### MARCH

Board approves repayment of costs associated with a rehabilitation project for the Kaw Hydroelectric plant Oklahoma Secretary of Energy and Environment Ken McQueen speaks at Annual Meeting

#### MAY

Board approves plan to enter into a contract for a battery storage project with Nextera Energy Resources

#### JUNE

Members of the OMPA Field Services Department assist in the Light Up the Navajo Nation effort Dave Osburn takes over as Chair of the American Public Power Association's Board of Directors

#### JULY

Board approves contract with Virtual Peaker for the establishment of a demand response program

#### SEPTEMBER

Construction project for OMPA's first ever solar generation begins in Kiowa County in southwest Oklahoma

### 2023 In Review

### **Chair Homer Nicholson**

The theme of the 2023 Annual Report, "Stepping Forward", is a reflection of the Oklahoma Municipal Power Authority's ability to take on significant challenges in its role as a wholesale power supplier, but also the manner in which the Authority has embraced the opportunity to show leadership in the public power industry.

It was a unique honor for General Manager Dave Osburn to take over as Chair of the American Public Power Association's (APPA) Board of Directors in June. The APPA has proven to be a stalwart in the advancement of public power and adding the general manager's voice to that effort was an acknowledgment of the OMPA way. This was re-enforced by other OMPA staffers

### **General Manager Dave Osburn**

serving in key roles at APPA's conferences and on boards and committees throughout the year, including Director of Member Services Jennifer Smith in a role on the Board of Directors for the APPA's Demonstration of Energy & Efficiency Developments program. This leadership was paralleled by the OMPA Board, as Chair Homer Nicholson continued to serve on the APPA's Policy Maker's Council and Jason McPherson on the APPA Board of Directors.

Beyond the conference and meeting rooms, more leadership was taking place, as a crew from the Field Services Department volunteered to assist with the Light Up Navajo Nation project. The OMPA crew of five was joined by another crew from Edmond Electric who spent a week bringing electric service to the Navajo Nation, which occupies parts of New Mexico, Arizona and Utah. The dozens of utilities who have participated in the project over the years show the strength of public power when its communities and agencies band together.

"Stepping Forward" isn't just about being out front with personnel, however. It's also about continuing to move the organization and its members ahead as regulatory bodies and customers continue to have emerging mandates and expectations. In response, OMPA in 2023 finalized several key steps related to capacity and demand.

The Authority had previously agreed upon terms to purchase power from a solar project, but 2023 marked that development actually breaking ground, after temporary delays. The North Fork Solar project, located in Kiowa County near members Altus and Frederick, marks the first time OMPA has added solar generation to its resource mix. The well-priced addition not only contributes to the Authority's future flexibility, but gives commercial customers of member utilities who want renewable resources an opportunity to purchase newly created renewable energy credits.

The Board of Directors also approved, and work began, on a rehabilitation project for the Authority's longest-held resource, the Kaw Hydroelectric facility near Ponca City. The work slated to be completed there will ensure that the facility continues to be a part of OMPA's resources in the coming years.

Meeting demand is about more than just creating and maintaining capacity, however. It is also about keeping demand in check. OMPA has for many years offered energy-efficiency-related programs designed to do that. In July, the Board of Directors approved a 5-year contract with Virtual Peaker for the creation of a demand response program. These types of offerings have been in existence throughout the industry for years and involve incentives to customers for allowing their usage to be controlled during peak events. As such, the program promises to bring benefits to not just end-use customers, but also OMPA's member utilities and the Authority itself.

The year was a welcome one in terms of cost to members, as low natural gas prices helped lead to a precipitous drop in costs from the year before. In general, the Authority has done an impressive job in curtailing costs to its members, as its mission statement long dictated it should. The graph on page 9 shows just how much OMPA costs have been kept in check over the last decade, when compared to both the rate of inflation and the rise in average retail rates nationally and in Oklahoma. OMPA leaders – both staff and the Board of Directors – have done an effective job of managing costs, even with all the obstacles that have arisen.

Also included on that page is a graph showing the financial benefit being a public power community has had for the members. OMPA cities and towns see the revenues from owning their own electric systems filtrate throughout their communities in the form of improved municipal services and other offerings that improve their quality of life. It's impactful to see such a large number and the customers of OMPA member utilities should be thankful for their local systems.

With a solid founding model, OMPA has always been well-positioned to bring benefits to the members it serves. Thanks to the leadership found throughout the organization, it carried out that mission in 2023 and is ready to continue doing so in 2024 and beyond.

# Financial

# Public Power Provides Value

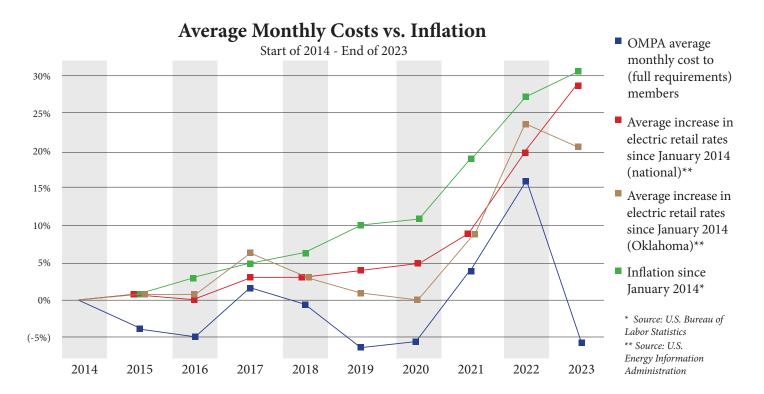

# \$63.7 million

of annual benefits to OMPA's 42 member communities OMPA staff, with assistance from staff in certain member utilities, has been assembling value reports to show the tangible fiscal benefit of municipalowned utilities to the communities they serve. Through 2016-2023, more than half of the OMPA membership had individual reports compiled for their utilities.

The results showed an average of \$530 of value per meter served each year. Multiplied by the number of meters served across the OMPA footprint, that is a collective value of \$63,782,320 annually for the communities who are a part of the Authority.

#### **OMPA Costs Remain Low**

Providing low-cost power has always been part of the mission of OMPA. That focus can be seen in how well the Authority has restricted costs to cities over the past decade, outpacing both the rate of inflation and increases in the average retail rate both state-wide and nationally. As OMPA keeps pace with changes and challenges in the industry, it will strive to keep costs to the members a focal point.

# Membership

The Oklahoma Municipal Power Authority (OMPA) is a wholesale power company owned by 42 municipal electric utilities located in 29 Oklahoma counties.

In 2023, OMPA provided power to 120,344 customers in its member cities, including 104,476 residential customers and 15,869 commercial/industrial customers. OMPA's service area encompasses approximately 250,000 Oklahomans.

## Generation

### Resource Mix

Natural gas was the leading resource for the Authority in 2023 at 55 percent of the mix. This was the first time that natural gas made up that large a percentage of the resource mix.

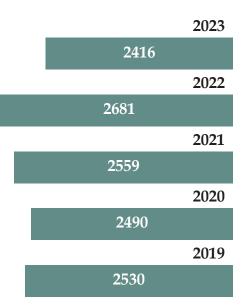

### System-Wide Peak

OMPA's coincident peak for utilities served in Oklahoma only was 711 megawatts in 2023, which was slightly down from the year before.

OMPA's total power delivered in 2023 was 2,416 gigawatt hours, which remained similar to recent years.

In all, 24,851 gigawatt hours of power have been delivered in the last 10 years.

### **Resources**

The North Fork Solar Farm and accompanying substation being constructed in southwest Oklahoma.

Remaining flexible has always been a priority for The Authority when analyzing long-range generation planning. That strategy has proved useful as OMPA has found itself forced to respond quickly to regulatory changes and plant retirements that altered the Authority's resource mix.

Part of that response included an agreement to purchase power from the North Fork Solar Farm, which broke ground on construction in 2023. This marked the first time that solar would be part of OMPA's resource mix, joining other generating types natural gas, coal, wind, hydro, steam, petroleum and landfill-to-gas, which have all been used to at one time to supply OMPA's power since it began serving member cities and towns in 1985.

The North Fork Solar Farm is located in Kiowa County, in southwest Oklahoma near members Frederick and Altus. OMPA's 15-year purchase agreement comes at a cost-efficient fixed price and will further help diversify the Authority's resources. It is rated at 120 megawatts of nameplate capacity.

Recurrent Energy, a subsidiary of Canadian Solar Inc., was the developer for the project.

Even with the addition of the solar farm, OMPA expects to have natural gas lead the resource mix. It was an all-time high of 55 percent of the mix in 2023, followed by renewables – including hydro and wind generation – at 24 percent.

#### When generating types joined OMPA resource mix

## Programs

In the fall of 2023, OMPA began offering the Turn Down the Watts program. It is a voluntary program, designed to incentivize residential customers to lower their demand during peak periods, reducing overall costs for both they and the Authority.

As part of the program, customers are offered a rebate for eligible Smart Thermostats. In addition, those with Smart Thermostats are also offered the chance to enroll in the demand response program, which offers incentives for sign-up as well as participation in demand control operations during peak periods.

These programs are in addition to other efficiency-related rebate and audit programs that OMPA offers to member customers. Some of them, such as the Ways I Save Electricity (W.I.S.E.) program are offered on a cost-share basis with the participating member utility. Others are operated by OMPA, including the Demand & Energy Efficiency Program (DEEP), as well as residential energy audits.
